To do these calculations, use the equation $\mathbf{p H}=-\boldsymbol{\operatorname { l o g }}\left[\mathbf{H}_{3} \mathbf{O}^{+}\right]$, to reverse it
$\mathbf{1 0}^{-\mathrm{pH}}=\left[\mathrm{H}_{3} \mathrm{O}^{+}\right]$. In any solution hydronium concentration in moles/liter (M) multiplied by the hydroxide concentration $(\mathrm{M})$ will equal $1 \times 10^{-14} .\left[\mathrm{H}_{\mathbf{3}} \mathbf{O}^{+}\right]\left[\mathrm{OH}^{-}\right]=\mathbf{1 \times 1 0} \mathbf{1 0}^{-14}$ $\mathbf{p H}+\mathbf{p O H}=14$.
