4- __________________________

Slide 3
Definitions of Abnormal Behaviors:
1- The person may have ______________________________, endless worry and
   __________________________.
2- The person _______________________________________.
   He/she cannot react normally or is constantly depressed.
3- The person cannot ________________________________________________ __.
4- The person has ____________________________________________ ___________.
5- The person sees the world as _______________________________________ __.
All of us fall somewhere on this scale. Furthermore, we all fluctuate from week to week or month to month from one point to another.

The two end points are theoretical, of course –

In your opinion, how would someone with a severe disorder differ from someone with a mild disorder?

Others’ Comments (Notes):
Attention-Deficit/Hyperactivity Disorder (ADHD):
